IOT-Based Hydroenergy Generation with the Application of Sensors

Pranjal Chaturvedi

Data Scientist at PVH
Gurugram, Haryana, India

Summary

Highly motivated professional with 8+ years of experience in data analysis. A quick learner and a strong team player with a drive to ensure tasks are completed on time and to a high standard. Always up for a challenging task and not one to shy away from anything that can develop me as an employee, as a student and as an individual.

Experience

PVH - PVHardware

Data Science Engineer
September 2022 - Present (4 years 3 months)
Gurugram, Haryana, India

I work at the intersection of product ownership and data science engineering, with end-to-end responsibility for two safety-critical ML systems where operational failure carries significant business and operational risk.

My role goes well beyond engineering. For each system I own, I manage the full product lifecycle - from translating a high-level feature request into a defined scope (with explicit boundaries on what we are and aren't building), through Agile delivery in Jira, to production deployment and ongoing stakeholder reporting. I author user stories, define acceptance criteria and Definitions of Done, estimate story points, plan phased releases, and coordinate cross-team dependencies throughout.

I engage internal stakeholders including the Developers, Managers, Directors and Post-sales team throughout delivery, translating technical progress into operational context.
Key systems I've owned end-to-end:
- A real-time IoT Alert Monitoring system processing data across 700+ solar plants via MQTT streams, enabling stakeholders to rapidly identify and prioritise faulty tracking systems.
- A Hail Forecasting system improving defence positioning accuracy.
- A Wind Prediction model (XGBoost) and its related simulations.

- Ad-hoc technical support requests related to data extraction and report generations.

On the infrastructure side, I also architected InfluxDB-to-BigQuery migration pipelines on GCP and built an internal library for querying 1B+ row datasets that cut ML training time significantly.

Hitech Digital Solutions

4 years 9 months

Aeronautical Analyst 2

April 2021 - September 2022 (1 year 6 months)

Ahmedabad, Gujarat, India

In addition to my extant duties as an Analyst 1, I undertook the responsibility for the following:

- Conducting meticulous final release checks (PDF checks) of charts before their official release.
- Addressing inquiries and providing guidance to Analyst 1 colleagues in their daily tasks.
- Initiating queries pertaining to State documents, encompassing anomalies, State-specific standards, processes, and the like, as identified within the team. This involved utilising the appropriate communication channels and clarifying any uncertainties team members may have regarding diverse State and Regulatory documents.

Throughout my tenure at Hitech, I have accomplished the following milestones:

- Consistently maintained a remarkable job delivery accuracy exceeding 98% and consistently met all deadlines.
- Successfully concluded a pilot project involving the validation of Ops Planning Outputs, leading to its permanent adoption within the operational framework.
- Received multiple acknowledgements and accolades from my supervisors for sustained excellence in performance and dedication to delivering high-quality output.

Aeronautical Analyst 1

January 2018 - April 2021 (3 years 4 months)

Ahmedabad, Gujarat, India

I commenced my tenure as a Trainee Aeronautical Analyst and advanced to the position of Analyst 1 subsequent to the successful fulfilment of requisite

training. The scope of daily responsibilities encompasses, but is not confined to, the following:
- Thorough analysis and assessment of NOTAMs, AIPs, AIP Amendments, AIRAC AIP Amendments, AIP Supplements, and other acknowledged aeronautical national documents pertinent to products within the specified area of responsibility, chiefly covering North Europe and select portions of South Europe, or as necessitated.
- Sustain a comprehensive understanding of ICAO standards and PANS-OPS.
- Modification and/or creation of charts to accommodate identified changes subsequent to the compilation of national (state) documents. This process is executed utilising Bentley MicroStation and Adobe InDesign, meticulously aligning with chart specifications.
- Rigorously uphold compliance with all quality procedures, promptly notifying relevant personnel in the event of non-conformities.
- Facilitate effective communication with relevant staff, addressing inquiries including state source data discrepancies or specification-related queries.
- Conduct thorough assessments of Ops Planning Outputs (Work orders).
- Actively participate as an integral team member in the routine production and updating of charts.

In February 2020, I received specialised training in chart quality assurance, augmenting my responsibilities to encompass the following:
- Methodically scrutinise the work performed by Analysts 1 (Jr), ensuring a high standard of quality.
- Provide constructive feedback to Analysts 1 (Jr), fostering a continuous learning and developmental ethos.

Defence Research and Development Organisation (DRDO)
Intern
June 2017 - July 2017 (2 months)
Dehra Dun, Uttarakhand, India

Hindustan Aeronautics Limited
Vocational Trainee
June 2016 - July 2016 (2 months)
Odisha, India

Education

University of Petroleum and Energy Studies

Bachelor of Technology (B.Tech.), Aerospace Engineering with specialization in Avionics · (2014 - 2018)
